

of biologically inspired materials and biosensors.

His present research interests are focused on phenomena of dynamic self-assembly, modularity in cell signaling, and physical bases of cellular homeostasis – all toward understanding and designing synthetic materials inspired by biology and toward understanding the origins of life.

Parikh can be reached by e-mail at [anparikh@ucdavis.edu](mailto:anparikh@ucdavis.edu) or [parikh@ntu.edu.sg](mailto:parikh@ntu.edu.sg).

**Atul N. Parikh** is professor in the Departments of Biomedical Engineering and of Chemical Engineering and Materials Science at the University of California, Davis. Since 2012, he is also serving as Visiting Professor in the school of Materials Science & Engineering at Nanyang Technological University in Singapore.

He studied Chemical Engineering at the Dept. of Chemical Technology (UDCT) University of Bombay (B. Chem. Eng., 1987) and Materials Science (Degree: Polymer Science) at the Pennsylvania State University (Ph.D. 1994). Between 1996 and 2001, as postdoctoral scholar and then technical staff member in the Chemical Science and Bioscience divisions at Los Alamos National Laboratory (LANL), he explored design
